General Guidelines for Presentation

- Slides should not be too heavy with content. Better to create point wise.
- If you require more than one slide for any point, right click on that point slide then select duplicate slide and modify the duplicated slide.
- Diagrams must be aligned at centre and clearly visible with caption.
- All the mentioned fonts, font size, title content, etc should not change and strictly as per the given format and guidelines.

1. Introduction

Problem Identified :

Students often face difficulty accessing academic materials like notes, assignment and project files from a single platform.

Communication between students and faculty for doubt solving is limited and not organized.

Solution Proposed :

APSIT Connect is a centralized platform where students can upload and download academic resources easily.

It also provides a discussion forum where students can ask doubts and receive guidance from faculty members.

2. Objectives

1.To build a login and registration system so only verified students can access the platform

2.To develop a module where students can upload and download academic materials like notes, assignments, and project files.

3.To implement subject-wise and year-wise organization of academic content for easy searching.

4.To create a discussion section where students can ask doubts and get guidance from faculty.

3. Scope

1. Can be applied in colleges for academic resource sharing.
2. Useful for students and faculty for knowledge exchange.
3. Can be used for assignment and project collaboration.
4. Can improve academic communication.

4. Feature /Functionality

Feature 1: Login System
Allows users to log in using email and password with role selection (Student or Teacher) for secure access.

Feature 2: Role-Based Dashboard
Displays a dashboard with modules such as Attendance, Notes, Discussion, and Assignments according to the user role.

Feature 3: Attendance Module
Provides a section where students can view attendance and teachers can manage attendance records.

Feature 4: Discussion Module
Provides a platform where students can ask doubts and teachers can respond.

5. Outcome of Project

6. Technology Stack

1. **Frontend** -Flutter Framework, Dart Programming Language

   Material Design (Material UI), GridView Layout

2. **Backend** - Local In-Memory Database (Map in Dart)

   Role-Based Authentication, Data Handling using Dart

7. Block Diagram (if applicable)
